Phase II Prospectus

What Is the PCOR Partnership?

The Plains CO₂ Reduction (PCOR) Partnership is a diverse group of public and private sector stakeholders working together to better understand the technical and economic feasibility of capturing and storing carbon dioxide (CO₂) emissions from stationary sources of CO₂ in the central interior of North America. The PCOR Partnership is managed by the Energy & Environmental Research Center (EERC) at the University of North Dakota and is one of seven regional partnerships funded by the U.S. Department of Energy’s (DOE’s) Regional Carbon Sequestration Partnership Intitiative and a broad range of project sponsors.

Phase I activities were completed in September 2005. On June 9, 2005, the EERC was awarded a contract for Phase II, which began in October 2005. Phase II is a 4-year program focused on demonstration and validation of promising CO₂ sequestration opportunities in our region. The total value of Phase II is currently over $21.5 million, with two-thirds of that funding coming from DOE and the balance contributed by industry and other nonfederal partners. The EERC is currently seeking additional partners for Phase II.

PCOR Partnership Phase I Accomplishments

The Partnership has assessed and prioritized the opportunities for sequestration in the region and helped to resolve the technical, regulatory, and environmental barriers to the most promising sequestration opportunities. At the same time, the PCOR Partnership has informed policy makers and the public regarding CO₂ sources, sequestration strategies, and sequestration opportunities. The following products were completed in Phase I:

- A comprehensive regional assessment of CO₂ sources and sinks.
- The development of the PCOR Partnership Decision Support System (DSS), a geographic information system (GIS)-based database trust providing our sponsors with a tool to evaluate CO₂ sequestration opportunities in the PCOR Partnership region.
- Identification, ranking, and action plans for promising sequestration demonstration projects.
- Key GIS products for CO₂ sources and sinks, infrastructure, and regulatory issues.
- Recommendations for monitoring and verification systems.
- Outreach materials including technical topical reports and fact sheets on key regional sequestration topics, a public

Who Is Involved in the PCOR Partnership?

The PCOR Partnership includes many public and private sector stakeholders from the region and elsewhere that represent expertise in agriculture, forestry, economics, energy exploration and production, geology, engineering, and the environment. Our partners provide technical services to the PCOR Partnership by providing data, guidance, and practical experience with direct and indirect sequestration, including value-added projects. PCOR Partnership Phase I and II partners include the following:

- U.S. Department of Energy
- University of North Dakota Energy & Environmental Research Center
- Abengo Bioenergy New Technologies
- Advanced Geotechnology, a division of Hycal Energy Research Laboratories, Ltd.
- Air Products and Chemicals, Inc.
- Alberta Department of Energy
- Alberta Energy and Utilities Board
- Alberta Energy Research Institute
- Alberta Geological Survey
- Ameren Corporation

"Joining the Plains [CO₂ Reduction] Partnership is an approach that will dovetail nicely with our own carbon management policy and other carbon sequestration projects."

**PCOR Partnership Phase II Goals and Objectives**

The overall goal of PCOR Partnership Phase II is to validate technologies and identify locations in the Partnership region that can support future full-scale geological and terrestrial sequestration opportunities. The PCOR Partnership will accomplish this goal by:

- Continuing to assess regional carbon sequestration opportunities.
- Developing field validation projects.
- Evaluating the feasibility of commercial-scale selected carbon sequestration technologies.
- Assessing sink capacity permanence, economics, risk, public acceptance, and societal and monetary co-benefits.
- Providing outreach and education for CO₂ sequestration stakeholders and the general public.

Work continues on the development and implementation of one terrestrial sequestration field trial and two or more geologic field trials in Phase II. Our Phase II partners will have a voice in determining the direction of the PCOR Partnership and early access to the results of the program. Participation in Phase II also provides partners with unique opportunities to develop working relationships with stakeholders that represent a diverse cross section of CO₂ producers, end users, and regulators. Specifically, one of the goals of the PCOR Partnership is to broker working relationships between industries that generate CO₂, those that can use it for value-added sequestration activities such as enhanced oil recovery (EOR), and the government agencies that oversee such activities.

Field validation tests include:

- Injection of acid gas into a depleted oil reservoir in Alberta, Canada, for acid gas disposal, EOR, and carbon sequestration.
- Injection of CO₂ into a deep carbonate reservoir in North Dakota for EOR and carbon sequestration.
- Injection of CO₂ into a lignite coal seam for enhanced methane production and carbon sequestration.
- Restoration of prairie pothole wetlands for carbon sequestration.

**How can you be involved?** We are currently seeking additional partners interested in PCOR Partnership Phase II activities. To learn more, contact:

**Edward N. Steadman**, Senior Research Advisor, (701) 777-5279; esteadman@undeerc.org

**John A. Harju**, Associate Director for Research, (701) 777-5157; jharju@undeerc.org
